

Mikhail Danilovich

Senior Frontend Developer

Belarus (Minsk), open to relocation. Any work format (office, remote, hybrid)

Telegram: [@f0pp1](#) | Email: danilovich36misha@gmail.com | GitHub: [mishadanilovich](#)

Frontend Developer with 5+ years of commercial experience in React and TypeScript. Built large enterprise systems and a healthcare product: VK's HR electronic document management platform, the Azerbaijan tax system, and a medical portal. Specialized in web performance and optimization, including Core Web Vitals. Extensive experience with complex multi-step forms, RBAC and ABAC access models, and real-time features over WebSocket. Introduced AI into code review, use Claude Code daily, and integrate LLMs into products. Design frontend architecture and have full-stack experience in pet projects.

SKILLS

- Frontend: JavaScript / TypeScript / React / Next.js / HTML5 / Web Workers / PWA
- State & Routing: Redux / Redux Toolkit / RTK Query / Redux-Saga / TanStack Query / React Router
- Styles: CSS3 / Sass (SCSS) / CSS Modules / styled-components / MUI (Material UI) / Tailwind CSS / shadcn/ui
- Forms: React Hook Form / React Final Form / Formik / Yup / Zod / class-validator
- Testing: Jest / React Testing Library / Vitest / Playwright / Cypress
- Infrastructure: Git / Vite / Storybook / ESLint / Prettier / Stylelint / Husky / GitHub Actions / GitLab / Vercel
- Utils: react-window / i18next / InversifyJS / class-transformer / ahooks / dnd-kit / Serwist / Dexie.js / IndexedDB
- Backend: NestJS / PostgreSQL / TypeORM / Prisma / Supabase
- API & Networking: REST API / Axios / WebSocket / OpenAPI / GraphQL / Stripe
- Auth & Access: OAuth / JWT / CASL / RBAC / ABAC / Row-Level Security
- Architecture: Modular Architecture / Feature-Sliced Design / Monorepo / Dependency Injection
- AI: Claude Code / Claude API / LLM integration

EXPERIENCE

VK HR Tek (Senior Frontend Developer)

09.2025 – 04.2026

VK's corporate platform for HR electronic document management. Enables large organizations to create, approve, sign, and store legally binding HR documents electronically.

Tech Stack: React / TypeScript / Redux Toolkit / RTK Query / OpenAPI / CSS Modules / Tailwind CSS / WebSocket / Web Workers / react-window / InversifyJS / CASL / React Final Form / class-validator / class-transformer / i18next / dnd-kit / Storybook / Jest / React Testing Library

Key Achievements:

- Built an interactive visualization of multi-stage approval routes as a node tree with panning and zooming: wrote a custom recursive layout algorithm, moved the computation to a Web Worker, and added render memoization. The UI stays responsive even on large, deeply nested routes.
- Designed a reusable infinite-loading mechanism with virtualization and unified all document and notification lists on top of it, eliminating lag when working with large data sets.
- Introduced AI-assisted code review in the team: wrote guidelines, prompts, and reusable rules, which sped up reviews and aligned code standards.
- Increased unit and integration test coverage of UI components and core logic from 75% to 83%.

Key Responsibilities:

- Designed and implemented real-time notifications over WebSocket.
- Integrated modules with the backend using a contract-first approach via services and DTOs generated from OpenAPI.
- Developed complex multi-step forms with client-side validation and typed data mapping using React Final Form, class-validator, and class-transformer.
- Built features on top of a CASL access model (RBAC and ABAC), with permissions for UI elements and actions based on user roles and document attributes.
- Developed UI components with dependency injection via InversifyJS, evolved the shared component library in Storybook, and implemented localization with i18next.
- Created an internship program for the company's frontend interns (3 interns).

Azerbaijan Tax System (Senior Frontend Developer)

11.2023 – 08.2025

Platform of the Azerbaijan tax service for automating tax administration. Tax service employees run internal processes in it, while taxpayers submit applications and prepare documents online.

Tech Stack: React / TypeScript / React Router / Redux Toolkit / RTK Query / Tailwind CSS / Sass / React Hook Form / Yup / react-window / ahooks / i18next / Storybook / Vitest / React Testing Library / Playwright / GitLab

Key Achievements:

- Optimized a documents table with 10,000+ records by introducing virtualization and cursor-based pagination. Time to first content dropped from 2.4 s to 0.4 s, the number of DOM nodes decreased 40x, and the initial payload shrank from 3 MB to 20 KB.
- Migrated 5 services from JavaScript to TypeScript in strict mode. In the process, found and fixed several hidden bugs, including missing null/undefined checks and incorrect API response handling, and removed dead code.
- Optimized the performance of complex forms with deep nesting and inter-field dependencies by splitting them into isolated subforms and lazy-loading sections. Input latency dropped by about 40%, and re-renders per change decreased 1.5x.

Key Responsibilities:

- Covered core utilities and components with unit tests (Vitest, React Testing Library).
- Evolved Storybook: new stories, interactive scenarios with play functions, and component documentation.
- Conducted peer code reviews covering architectural decisions, code style compliance, potential bugs, and performance issues.
- Took part in the full task lifecycle, from requirements discussion and estimation (planning poker) to release.

BreedShow (Middle+ Frontend Developer)

06.2023 – 11.2023

Platform for choosing purebred animals with verified pedigrees (breed.show). Combines a CRM for dog and cat breeders, a marketplace for pet products and services, and a social network for breeders and animal lovers.

Tech Stack: React / TypeScript / Redux Toolkit / RTK Query / React Router / WebSocket / MUI / React Hook Form / Yup / Jest

Key Achievements:

- Made key technical decisions: designed a Feature-Sliced Design architecture split into CRM, marketplace, and social network modules, and chose the stack for the MVP that became the foundation of the product running today.
- Set up the project from scratch and established the frontend team process: code standards (ESLint, Prettier, Stylelint, Husky), a Kanban workflow with task breakdown and assignment, and regular code review.

Key Responsibilities:

- Developed CRM modules for breeders: tracking of animals, litters, and sales.
- Implemented real-time chats between users over WebSocket.
- Built a publications feed with infinite scroll and a marketplace catalog with filtering by breed, color, sex, and other parameters.
- Ran regular frontend team syncs to align decisions and supported junior developers.

FlowHealth (Middle Frontend Developer)

05.2022 – 06.2023

Healthcare platform connecting doctors, healthcare providers, and patients, with vaccination program management. Corporate clients, including Netflix, used the portal to vaccinate their employees.

Tech Stack: React / TypeScript / Redux / Redux-Saga / RTK Query / styled-components / React Hook Form / Storybook / Jest / React Testing Library

Key Achievements:

- Created an internal UI kit with separate entry points for tree-shaking, a public API, Storybook, and tests. Used across several domain projects, it eliminated component duplication and sped up the development of new interfaces.
- Carried out most of the migration from react-jss to styled-components: moved components to the new styling system and fixed issues with inconsistent style application.

Key Responsibilities:

- Developed vaccination management interfaces: booking, registration, and tracking flows for doctors, healthcare providers, and patients.
- Implemented asynchronous multi-step flows and side-effect handling with Redux-Saga for predictable data loading and UI state across the portal.
- Built reusable, accessible UI components with React, TypeScript, and styled-components, with unit tests (Jest, React Testing Library) and Storybook documentation.
- Designed features together with the backend team before development, documenting data flows, API contracts, requirements, and blockers.

Mosgosexpertiza (Junior Frontend Developer)

05.2021 – 05.2022

Public services portal of the Moscow State Expert Review for submitting design documentation for review. Built application forms with Formik and Yup and registry tables with sorting, filtering, and pagination, integrated with a REST API (React, TypeScript, Redux).

PET PROJECTS

FridgeMind (github.com/mishadanilovich/fridgemind). PWA for family meal and grocery planning. Next.js / Prisma / PostgreSQL / Supabase / Claude API. Data access control via Row-Level Security, real-time sync, offline mode with Serwist and IndexedDB, and grocery recognition from photos via Claude Vision.

Coffee Shop (github.com/mishadanilovich/coffee-shop). Coffee shop website with a cart, blog, and online payments. Next.js / NestJS / TypeORM / Stripe / GitHub Actions. Custom JWT authentication in NestJS, Stripe payments, and CI with unit tests.

LANGUAGES

English — B2 (Upper-Intermediate)

Russian — Native

EDUCATION

Minsk Radio Engineering College (branch of BSUIR), Faculty of Computer Science (09.2018 – 02.2022)
